

IMDBClone

About The Project

A web application with similar functionality to IMDB. Keeps a mongoDB database of movie information. Supports users who can browse all information (movies, people, other users), adding movie reviews, contributing new movies, and following other people/users. Additionally, this website will generate: movie recommendations based on user's data, lists of similar movies for each movie, and frequent collaborators for each person. Note:

- "people" refers to people who are part of a movie (director, writer, or actor)
- "users" refer to the users who made accounts and are using the application

Built With

- [Bootstrap](#)
- [node.js](#)
- [pug](#)
- [bootstrap5](#)
- [mongodb](#)
- [mongoose](#)
- [express](#)

Getting Started

To get a local copy up and running follow these simple steps.

Prerequisites

- node [Download Node.js and npm](#)
- npm

```
npm install npm@latest -g
```

- mongodb [Download mongodb](#)

Installation

1. Unzip submission and navigate to project level directory
2. Install NPM packages

```
npm install
```

3. Initialize the database

```
node database/database-initializer.js
```

4. Start the server

```
node mainServer.js
```
