About The Project

A web application with similar functionality to IMDB. Keeps a mongoDB database of movie information.
Supports users who can browse all information (movies, people, other users), adding movie reviews,
contributing new movies, and following other people/users. Additionally, this website will generate: movie
recommendations based on user's data, lists of similar movies for each movie, and frequent collaborators for
each person. Note:

- "people" refers to people who are part of a movie (director, writer, or actor)
- "users" refer to the users who made accounts and are using the application

Built With

- Bootstrap

- node.js

- pug

- bootstrap5

- mongodb

- mongoose

- [express](#)

Getting Started

To get a local copy up and running follow these simple steps.

Prerequisites

- node [Download Node.js and npm](#)

- npm

```
npm install npm@latest -g
```

Installation

1. Clone the repo

```
git clone https://github.com/phampe68/IMDBClone.git
```

2. Install NPM packages

```
npm install
```

3. Initialize the database

```
node database-initializer.js
```

4. Start the server

```
node mainServer.js
```

Usage

Use this space to show useful examples of how a project can be used. Additional screenshots, code examples and demos work well in this space. You may also link to more resources.

For more examples, please refer to the [Documentation](#)

Roadmap

See the [open issues](#) for a list of proposed features (and known issues).
